

ABSTRACT OF THE DISCLOSURE

An N-page printing function set on the basis of a physical sheet is provided by a printing control program installed in an information processing apparatus. In the information processing apparatus when designating of N-page printing, in which drawing data of N pages ($N > 1$, N is an integer) is to be printed on one print sheet, the drawing data of each page is arranged in each of equal N-divided areas of a physical sheet by scaling-down. Print data is produced based on the arranged drawing data.
